

# **IMPORTANT!**

This electric kit has to be installed by a professional workshop or a suitable qualified person.

The installation instructions must have been read and fully understood before the start of any installation. Please contact your wiring kit provider or the hotline shown in the footer should you need assistance!

Make sure the vehicle is approved/homologated by the manufacturer to tow a trailer!

Also please check that there is a definite compatibility between this vehicle and the electric kit! Following the installation of the electric kit, the fitting instructions should be kept together with the vehicle service document and vehicle handbook. The fitting instructions contain important information relating to the use and function of the towing kit as well as for any diagnostic or activation process, that might have to be repeated in the future (e.g. after the performance of a vehicle software update).

All warranty claims will be forfeited if the electric kit or components contained therein are used incorrectly or modified. If a towing socket adaptor has been used to connect to the trailer or bike rack, this must be removed from the trailer socket once the trailer or bike rack has been disconnected

If the trailer or bike rack is not equipped with a rear fog lamp, depending on the towing vehicle type, the correct function of the towing kit cannot be guaranteed. In such cases, a rear fog lamp should be retro fitted.

This towing electric kit will not be covered under warranty if any technical or electrical modifications or software updates have been performed by the vehicle manufacturer after the initial commissioning of the kit. That applies especially to modifications or updates which may cause malfunctions in the trailer socket or any other part of the trailer electrical equipment!

Depending on the type of trailer module used in this electric kit, diagnostic interrogation with the vehicle's electrical system may be limited or will not function. The error memory inside the trailer module may not be able to be accessed by vehicle manufacturers diagnostic system.

Error logs relating to the trailer electrical equipment, that may be generated in the vehicle manufacturers diagnostic system as a result of a test procedure, may be due to the incorrect installation of the towing electric kit or the false activation of the trailer module.

We always recommend whenever possible, the following troubleshooting process:

An analysis of the vehicle's error memory and possibly clearing of all faults before the start of the installation!

Try disconnecting the trailer module from the towing harness and re-start the fault clearing process!

→ If in doubt, limit the time for troubleshooting to a max of 0.5 hours and call our Technical Support Team!

Please follow our instructions carefully and always test the towing electrics using a true lighting board or a specifically designed bulb tester. If an LED tester is used, ensure it is equipped with correct load resistors or malfunctions will occur!

### Set up trailer operation

Passat Saloon Passat Estate Passat Alltrack СС Jetta

11/10->10/14 11/10->10/14 02/12->10/14 01/12-> 01/11->

General After the installation of the electric kit, the obligatory trailer lighting, Towing vehicle and trailer stabilisation, as well as the trailer indicator control which is statutory in a several countries are guaranteed without having to make any connections on the vehicle!

The message "Control unit incorrectly coded" will, however, appear in the fault

(19 – Diagnosis interface for data bus)! Yet this entry has no effect on the other functions and can be ignored until your next regular service appointment. We recommend the connection via the factory-mounted service tester within the framework of the annual service intervals!

- Please effect coding as follows: Vehicle self-diagnosis

- self-diagnosis
  19 diagnosis interface for data bus
  008-Coding (service 22)
  008.02 assembly list coding
- 69 trailer function (switch to coded!)
  confirm with OK !

### Vehicles with park assist systems:

The automatic deactivation of the rear park assist system in trailer operation will be effected by means of the subsequent coding of the park assist control unit:

- Vehicle self-diagnosis
   10 park assist system II
   009 Coding
- Master

35

- 009.02 plain text coding
  select trailer system
  confirm with OK !

Vehicles with front sensors: On vehicles with front sensors, the control unit must be coded as follows:

- Vehicle self-diagnosis
  A5 front sensors
  coding
  Master

- clear text encoding
  trailer → with hitch
  press "continue"

### NOTE:

Systems such as power assisted steering, Lane Change Assistant and Side Assist must be de-activated during towing. Please consult your owner handbook or dealer for further information!

Vehicles with start-stop system:

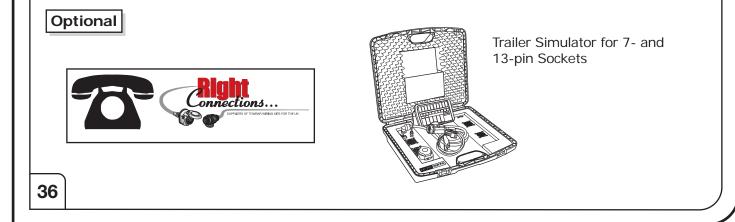

→ The start-stop system is deactivated in trailer mode!

Towing vehicle and trailer stabilisation:

In most vehicles as of model year 2009 the automatic activation the towing vehicle and trailer stabilisation can be checked as follows:

or evaluation via vehicle diagnosis:

- Connect trailer to vehicle electrically
- Vehicle self-diagnosis
   03 Brake electronics
- 011 Measured values
   Enter "10" and "Q"
- Trailer yes
